Strategic Insights & Action

High Risk Profile

- Tenure: 0–10 days
- Payment: COD
- Complaint: Yes
- Distance: >20 km
- Category: Mobile / Fashion

Moderate to Low Risk Profile

- Multiple devices (4+)
- Moderate usage (2–4 hrs)
- Low–mid satisfaction (2–3)
- Tenure >30 days
- No complaints
- Stable usage

Key Insight

Churn is heavily concentrated in the **early user lifecycle (0–10 days)**, indicating weak onboarding and low initial engagement. Users with **Cash on Delivery (COD)**, **high price sensitivity (order amount hikes)**, and those in **high-expectation** categories like **Mobile** show significantly higher churn. Additionally, **early inactivity**, **low order frequency**, and **multi-device usage** are strong behavioral indicators of disengagement and low customer loyalty.

Action Plan

Strengthen onboarding experience

- Offer first-order discounts and guided app walkthroughs
- Focus on engaging users within the first 7–10 days

Reduce COD dependency

- Provide incentives for prepaid methods (UPI, cards)
- Limit COD for high-risk users

Control pricing and avoid sudden hikes

- Implement gradual price changes
- Offer price protection or targeted discounts

Implement Risk-Based Retention Strategy

- Target High Risk users with retention actions to prevent churn
- Engage Medium–Low Risk users to increase lifetime value

Action Plan

Improve high-churn categories (Mobile, Fashion)

- Enhance product details, reviews, and return policies
- Ensure better customer experience

Re-engage inactive users early

- Trigger push notifications within 3–5 days of inactivity
- Use personalized offers and reminders

Increase customer retention through habit-building

- Introduce loyalty programs and rewards
- Encourage repeat purchases with offers after initial orders

Target multi-device users with personalization

- Use cross-device tracking for consistent experience
- Retarget users with customized recommendations
